PROFESSIONAL SUMMARY

Software Engineer II with 3+ years of experience building cloud infrastructure, security detection systems, CI/CD deployment automation, data pipelines, LLM-integrated tooling, AI-assisted debugging tools, and production tooling across large-scale distributed environments. Strong background in Java, Python, SQL, Kubernetes, Oracle Cloud Infrastructure, Linux, OS patching, incident response, and reliability-focused engineering.

TECHNICAL SKILLS

Languages: Java, Python, SQL
Cloud & Infrastructure: Oracle Cloud Infrastructure (OCI), Kubernetes, Docker, Terraform, Oracle Linux, ARM, x86
Backend & Data: Apache Airflow, Apache Spark (Spark SQL), SQL reporting, data pipelines, scheduled jobs, database diagnostics, Redis, microservices, distributed systems, REST APIs, authentication/authorization
AI & LLM: Claude API, LLM integration, prompt engineering, generative AI, streaming chat interfaces, AI-assisted debugging tools, MCP integrations, operational tooling
DevOps & Observability: CI/CD, Git, Infrastructure as Code, Prometheus, Grafana, on-call operations, deployment automation, OS patching
Security: MITRE ATT&CK, CrowdStrike Falcon, SIEM, vulnerability detection, vulnerability management, incident response, threat modeling

PROFESSIONAL EXPERIENCE

Oracle | Software Engineer II | Austin, TX | Oct 2025 - Present
- Engineered and deployed a Java/SQL security detection job on Apache Airflow to identify missing CrowdStrike Falcon agents across 2.5M+ OCI instances, processing 2M+ user records; established production monitoring with Grafana dashboards, alarms, and on-call runbooks.
- Automated 95% of the CI/CD deployment process for infrastructure provisioning, application deployments, and OS patching across existing and newly launched cloud regions and realms; serve as the team's subject matter expert.
- Created an AI-assisted troubleshooting skill used by 5,000+ customers to diagnose why CrowdStrike Falcon is not running on their instances.
- Built an Apache Airflow pipeline using Java-generated jobs and Spark SQL to process 700,000+ daily OCI and Falcon records; mapped instance ownership and delivered executive dashboards, reducing manual reporting time by 95%.
- Investigated and resolved 3,000+ customer and production deployment incidents across cloud vulnerability scanning services, validating agent configuration, integrations, and service readiness.

Oracle | Software Engineer I | Austin, TX | Jul 2023 - Oct 2025
- Authored 30+ security detection rules aligned to MITRE ATT&CK, adapting recommended techniques to internal threat models and improving detection coverage for cloud infrastructure services.
- Led migration of critical systems across 30+ global data centers to Oracle Linux 9 with zero downtime, maintaining service availability and production stability throughout rollout.
- Owned the production service logging canary system as subject matter expert, improving incident detection, operational visibility, and reliability for critical services.
- Onboarded team workflows to a multi-flock orchestration platform, streamlining automated rollout of infrastructure and security services to new regions and improving deployment efficiency by 50%.
- Migrated services from x86 to ARM architecture across five regional data centers, improving performance by 25% while reducing infrastructure costs.
- Partnered with project managers and engineering stakeholders to review, document, retest, and improve vulnerability detection rules, contributing to a 30% increase in user satisfaction.

Oracle | Software Engineering Intern | Remote | May 2022 - Aug 2022
- Migrated 10 microservices to Oracle Cloud using Kubernetes and containerized workloads, reducing application load time from 5 seconds to under 2 seconds.
- Developed an experimental Python-based augmented reality training prototype to improve engagement with ethics and compliance training.
- Documented CI/CD and DevOps workflows, reducing new engineer onboarding time by 50%.

Oracle | Software Engineering Intern | Remote | Jun 2021 - Aug 2021
- Designed scalable OCI cloud architecture for startup workloads, improving system response time by 40% under peak load.

PROJECTS

thriftAssist | Full-Stack AI Sustainable Fashion Assistant
- Implemented a full-stack web application (Node.js, Express, MongoDB) integrating the Claude API for LLM-powered streaming chat; designed REST APIs with user authentication, third-party API integration (eBay), and automated test coverage (Jest, Supertest).

EDUCATION

Clark University | Bachelor's Degree, Computer Science; Minor in Management | May 2023
